I sincerely appreciate the constructive peer review process followed for this manuscript. The comments received from the reviewers were detailed, technically useful and valuable in improving the final quality of the paper. In particular, the reviewers' remarks helped strengthen the mathematical clarity of the work, improve the explanation of the comparative framework, clarify the originality of the manuscript and enhance the consistency of the figures, tables, equations, references and technical terminology.

The review process also assisted in improving the presentation of the manuscript so that the comparison between TCSC, TSSC, SVC, STATCOM, SSSC and Synchronous Condensers is clearer, more structured and more useful for readers working in high-PV power systems. I believe that the final revised manuscript is significantly improved as a result of the peer review process and I thank the reviewers, Assistant Editor and WSEAS editorial team for their time, effort and professional handling of the manuscript.
